                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to a polymuclectide encoding a lung tumour protein, comprising a sequence selected from any of the 14 sequences mentioned in complement of S1, sequences (S2) mentioned in specification, complement of S1, sequences consisting of at least 20 contiguous residues complement of S1, sequences consisting of at least 20 contiguous residues CC of S1, sequences that hybridise to S1, sequences having 37$, preferably CC of S1, sequences mentioned in the specification, a sequence consisting the polymental sequences mentioned in the specification, a sequence concomplement of S1, or degenerate variants of S1. Also included are an isolated polymerleotide, or sequences having at least 70$, or expression vector comprising the polymerleotide operably linked to an expression control sequence, a host cell transformed or transfected with the vector, an isolated antibody (or its antigen-binding fragment) that specifically binds to the polymerleotide, detecting the presence of a cancer of a patient, a fusion protein comprising the polymerleotide, protein conditions, stimulating and/or expanding treals specific for a tumour conditions, stimulating and/or expanding the polymerleotide, protein or antigen protein (comprising cells, under conditions and for a time sufficient or antigen-presenting cells, under conditions and for a time sufficient conditions and/or expanding the prolymucleotide, protein or a patient with the polymucleotide, protein or a patient with the polymucleotide, protein or a patient with the polymucleotide, protein or prolymerleotide, protein and scells and the inhibiting the presenting cells and thus inhibiting the development of a cancer in a patient (particularly lung cancer in a patient polymucleotide is also lung in the des
                                                                                                                                                                                                                                                                                                                                                                                                                          Novel lung cancer polynucleotide encoding lung cancer protein, useful for detecting the presence of lung cancer in a patient, and in pharmaceutical compositions, e.g. vaccines, for treating lung cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  polypeptides and profess in tumour cells. An amplified portion of the polynucleotide is useful for isolating a full-length gene from a suitable library. The present sequence is a cDNA (full length, extended or partial) isolated from a library derived from lung tumour/cancer cells. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the USPTO at seqdata.uspto.gov/sequence.html?DocId=20020197669

The invention relates to novel compositions and methods for the therapy and diagnosis of cancer, particularly lung cancer. The compositions comprise one or more lung tumour polypeptides, immunogenic portions thereof, polynucleotides that encode such polypeptides, antigen presenting cells that express such polypeptides, and T cells that are specific for cells expressing such polypeptides. The novel compositions have cytostatic and immunostimulant activity. The lung tumour antigens can be used in the creation of a vaccine. The polynucleotides that encode the lung tumour polypeptides can be used in gene therapy to help in the treatment of lung tumoure. This polynucleotide sequence represents a human lung tumour cDNA clone of the invention. This sequence was not shown in the specification. It has been taken from a World Intellectual Property Organization CD ROM supplied with the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   222 GCTGTCGTTTGGTTTGATCTTGACTATGAGGAAGTTCTAGGAAAACTAGGAATCTAT 281

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           465
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           641
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             701
                                                                                                                                                                                                                                                                                                                                                                                 The invention describes an isolated polynucleotide comprising one of 32 sequences, complement or degenerate variants of them. The polynucleotide is useful for preparing a composition e.g. a vaccine or for gene therapy, for treating or inhibiting development of cancer, e.g. lung cancer. This sequence represents a polynucleotide associated with the compositions and methods for the therapy and diagnosis of lung cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               281

```
The invention relates to a novel isolated polynucleotide comprising a sequence chosen from any one of 40 lung tumour polypeptides or its complements, fragments or degenerate variants. The method of the invention has cytostatic applications and may be useful for detecting and treating lung cancer in a patient, as well as for inhibiting the cells isolated from a patient with at least one component chosen from a polypeptide, polynucleotide or antigen presenting cell (APC) of the polypeptide, polypucleotide or antigen presenting cell (APC) of the invention and administering an effective amount of the proliferated T cells to the patient. The current sequence is that of the human lung cancer-related GDNA of the invention. The current sequence is not shown in the specification per se but is available on the USPTO web-site http:seqdata.uspto.gov/sequence.html?DocID=20030211510.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ATTCAGTCCCTTCTCCATGAATGGTACACGCAGAACATGTTGAGGGAGAAGACTTGCAA 521

The invention relates to an isolated polypeptide (I) associated with breast cancer which is encoded by a nucleic acid molecule comprising a nucleotide sequence (SI). Further disclosed is an antibody that binds to the polypeptide of the invention. The activity of the polypeptide of the invention may be described as cytostatic. The antibody is useful for electecting the presence of (I) in a sample. Nucleic acid molecules of the invention are useful in the detection of breast tumours. (I) is useful a marker for breast cancer and in breast cancer therapy, Sequences given
                                                                                                                                                                                                                               705
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                in records ACN78851-ACN92934 represent nucleic acid markers associated with breast cancer. Note: The sequence listing does not form part of the specification but may be obtained in electronic format from the USPTO web

The invention relates to an isolated polynucleotide comprising any one of 38043 cDMs dequences, appearing as ACH12789-ACH50813, whose sequence was determined by the technique of 58H (sequencing by hybridiaation). Also included is a purified polypeptide comprising a sequence corresponding to a reading frame of the novel polynucleotide. The nucleac and sequences care useful in diagnostics as axpressed sequence tags (EST) for identifying expressed genes or for physical mapping of the human genome, in forensics, in assessing biodiversities, or in identifying mutations responsible for genetic disorders and other traits. The nucleotide sequences are also useful as hybridisation probes, as oligomers for PCR, for chromosome and gene mapping, in the recombinant production of protein, or in generating antisense DNA or RNA. The purified polypeptide is useful for generating antisense DNA or RNA. The purified polypeptide is useful for generating antisense DNA or RNA. The sequence is one of the 38043 isolated cDNA/EST sequences. Note: The sequence data for this patent dat one form part of the printed specification, but was cobtained in electronic format directly from USPPTO at sequence. Hall proceed the 2804 isolated cDNA/EST sequences.
                                                                                                                                                                                  Human, 88; sequencing by hybridisation, SBH; expressed sequence tag; EST; genome mapping; biodiversity; genetic disorder.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention relates to the isolation of human protein
modification and maintenance molecules (PWMM), and the polymucleoride
sequences encoding them. A total of 40 PMMM polypeptides (designated PMMM
- 1 to PMMM-40) are disclosed. The sequences of the invention are useful
for disgnosing a condition or disease associated with the expression of
for disgnosing a condition or disease associated with the expression of
pMMM in a subject, preparing a polycloan or monocloan antibody, and
generating an expression profile of a sample containing the
pMMM in a subject, preparing a polycloan or monocloan antibody, and
polymucleotides. The diseases or conditions associated with decreased
colored coldes. The diseases or conditions associated with decreased
polymucleotides or the diseases or conditions associated with decreased
colored colored colored colored colored disorders (e.g. epilopsy,
luntington's disease, stroke), immune/inflammatory disorders, (e.g. ADDS,
allergies), developmental disorders (e.g. hypothyroidism, Cushing's
syndrome), agarrointestinal or epithelial disorders, and infections. The
PMMM polypeptides or their fragments are useful in screening compounds
for effectiveness as agonists or antagonists of the polypeptides, or in
altering the expression of the target polymucleotide and compounds that

AB056306 to AB060787 represent isolated nucleic acids (I) differentially expressed in cancer tissues. ABB78993 to ABB79004 represent proteins expressed in cancer tissues. ABB78993 to ABB79004 represent proteins encoded by the AB060776 to AB060787 nucleic acid sequences. (I) can be used in antisense therapy. An antibody immunoreactive with a polypeptide encoded by (I) is useful for detecting cancer in a patient sample, and nucleic acid which hybridises to (I) in a cell. A probe/primer derived from (I) can be used for determining the presence of a nucleic acid which hybridises to (I), and for determining the phenotype of cells in a sample of coll cancer in a cell or tissue type, for determining the presence of colon cancer in a cell or tissue type, for determining the presence or state of other type of cancer, in antisense therapy, to generate or accorrange on a solid surface, to identify a chromosome on which the corresponding gene resides, and in tissue profiling, forensics, genetic analysis, mapping and diagnostic applications. (I) can be used to raise antibodies, and to screen for peptide analogues and antagonists
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö

The invention relates to polynucleotide and polypeptide sequences

associated with cancer, particularly colon cancer. Also disclosed are (i)

can expression vector comprising the polynucleotide, (ii) an isolated

transformed or transfected with the expression vector, (iii) an isolated

cantibody, or its antigen-binding fragment, which specifically binds to

cancer in a patient, (v) a fusion protein comprising at least one of

the polypeptides, (vi) an oligonucleotide that hybridises to the

cc of cancer in a patient, (v) a fusion protein comprising at least one of

the polypeptides, (vi) an oligonucleotide that hybridises to the

cc of cancer in the polypeptide sequence under highly stringent conditions, and (vii) a

method of stimulating and/or expanding T cells specific for a tumour

cc of c6448, C6358, C6378, C6408, C6358 or one of the potential open reading

cc frames (ORPS) of C6358. These polypeptides are encoded by the

cc polynucleotide sequences, where both are capable of eliciting a humoral

and/or cellular immune response. The polynucleotides, polypeptides are useful for diagnosing, preventing or transing cancer,

cc particularly colon cancer. The polynucleotide and polypeptide success

cc particularly colon cancer. The polynucleotide and polypeptide success

cc particularly colon cancer. The polynucleotide and polypeptide success

cc analysis, nucleic acid purification, isolation of transcriptionally

cantive genes, blocking or transcription factor binding, genome cleavage

cc in situ hybridisation, and as enhancers of transcription or

cc biomarkers. This sequence data for this patent was obciained in electronic

connact directly from the USPPTO web site at seqdata.uspto.gov
                                                                                                                                                                                                                                                                                            New isolated nucleic acids and polypeptides capable of eliciting humoral and/or cellular immune response, useful for diagnosing, preventing or treating cancer, particularly colon cancer.
                                                                                                                                                                                 Secrist

New human genome-derived single exon nucleic acid probes useful for human gene expression analysis, for identifying or characterizing alternative splicing events, for assessing genomic alterations or as tools for surveying tissues.

Claim 1; SEQ ID NO 26964; 80pp; English.

The invention relates to a nucleic acid probe for measuring human gene expression, comprising any of the 27,400 fully defined nucleotide compression, comprising any of the 27,400 fully defined nucleotide according a least 8 amino acids of any of the 6888 amino acid sequences for conditions at least 8 amino acids of any of the 6888 amino acid sequences for included are a spatially—

CC encoding at least 8 amino acids of any of the 6888 amino acid sequences (hybridises under high stringency conditions to a nucleic acid molecule expressed in human cells or tissues. Also included are a spatially—

CC expressed in human cells or tissues. Also included are a spatially—

CC and addressable set of single exon nucleic acid molecule or measuring human gene expression, a method of probes cited above, where each of the plurality of probes cited above, where each of the plurality of probes is separately

CC and addressably isolatable or amplifiable from the plurality, a single exon microarray for measuring human gene expression, a wethor of measuring human gene expression, a vector comprising at least 8

CC probe cited above, an ORF-encoded peptide comprising at least 8

CC contiguous amino acids of any of the above—mentioned amino acid sequences (Optionally with conservative amino acid substitutions), an isolated antibody that binds specifically to a peptide cited above, methods of selling and/or licensing single exon probes or microarrays to thorage expression and acid a single exon probe crited above. The probes may be used as tools for surveying croage medium which contains a database having a plurality of records croage medium which contains a database having a plurality of records croage medium which contains a database having a plurality of records croage medium which contains a database having a plurality of records croage medium which contains a database having a plurality of records croage medium which contains a database having a tools croage medium which croage medium and contains and contains and contains and c segdata.uspto.gov/sequence.html?DocID=20030194704

```
The invention relates to a nucleic acid probe for measuring human gene expression, comprising any of the 27,400 fully defined nucleotide sequences in the specification, or their complements or fragments, and encoding at least 8 amino acids of any of the 6888 amino acid sequences fully defined in the specification. The probe is a single exon probe that hybridises under high stringency conditions to a nucleic acid molecule expression human cells or tissues. Also included are a spatially-addressable set of single exon nucleic acid probes for measuring human cells or amplifiable from the plurality of probes is separately and addressably isolatable or amplifiable from the plurality), a single exon microarray for measuring human gene expression, a method of exon microarray for measuring human gene expression, a vector comprising at least 8 contiguous amino acids of any of the above-mentioned amino acid contiguous amino acids of any of the above-mentioned amino acid so isolated antibody that binds specifically to a peptide cited above, methods of selling and/or licensing single exon probes or microarrays to methods of selling and/or licensing single exon probes or microarrays to methods of selling and/or licensing single exon probes or microarrays con thuman gene expression data by subscription, and a computer-readable catorage medium which contains a database having a plurality of records (each record including data on the expression of a single exon probe

cited above. The probe, methods and apparatus are useful in gene expression analysis. The probes may be used as tools for surveying tissues to detect the presence of expressed messages that contain their specific exon, or in constructing genome-derived single exon microarrays. In addition, the probes are used in identifying and characterising alternative splicing events, in detecting and characterising gross alternative splicing events, in detecting and characterising gross smaller genomic alterations in the genomic locus that includes their exon, in assessing smaller genomic alterations, in priming the synthesis of nucleic acids, or in expressing the ORF-encoded peptide. The present sequence is a human single exon probe of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from USPTO at sequence.html?DocID=20030194704

```
The invention relates to nucleic acid sequences (AAX22111 to AAX22134) encoding human secreted proteins (AAX01155 to AAX01158). The secreted proteins (AAX01155 to AAX01158). The secreted protein gene sequences are deposited with the ATCC under deposit number and card sequences are deposited with the ATCC under deposit number nucleic acid sequences are used for the recombinant production of the nucleic acid sequences are used for the recombinant production of the nucleic acid sequences are used for the recombinant production of the nucleic acid sequences are useful for preventing, treating or ameliorating medical for are useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. Pathological conditions can be also dispnosed by determining the amount of the new polypebtides in a sample or by determining the presence of mutations in the new polypeptides in a polymucleotides, based on which tissues they are most highly expressed in, and include developing products for the diagnosis or treatment of cancer, tumours, developmental abnormalities and foctal deficiencies, autoimmune diseases, lymphomas, Alzheimer's and cognitive disorders, autoimmune diseases, respiratory disorders, immune deficiency disorders, immune deficiency disorders, immune deficiency disorders, immune disorders, neural disorders, neural disorders, excleteral disorders, endocrine for identifying that binding partners. The present sequence represents a number and clone identification)

The invention relates to novel genes ADA39629-ADA40565 and proteins
ADA40566-ADA41501 for human secreted proteins, useful for preventing,
treating or amaliorating medical conditions e.g. by protein or gene
therapy. The polypeptides, nucleic acid molecules, antibodies or their
cuseful for preparing a diagnostic or pharmaceutical composition for
tragments, and agonists or antagonists that bind to the polypeptide are
useful for preparing a diagnostic or pharmaceutical composition for
cuseful for preparing a diagnostic or cher hyperproliferative disorder. The
polypeptides and nucleic acid molecules are also useful for detecting,
concern diagnosing, prognosticating, treating or ameliorating cancer
or other hyperproliferative disorders including neoplasms, autoimmune
disorders (e.g. diabetes, rheumatoid architis, systemic lupus
concern diabetes, rheumatoid architis, systemic lupus
anemia, haematopoletic or haematological disorders (e.g. anaemia,
thrombocytopenia), allergic reactions including asthms or eczema,
thrombocytopenia, allergic reactions including asthms or experimental
contained or viral infections including HIV/AIDS), or wound healing and
disorders of peithhelial cell proliferation. The nucleic acides are also
useful for chromosome identification, rediation hybrid and propertication
contained in chromosome identification, rediation hybrid and propertication
of the tissues immunohistopical probes for differential identification
of the tissues immunohistopical probes for differential identification
of the tissues immunohistopical probes of the parent did not form part of the printed specification, the patent did not form part of the printed specification or disappance.

This patent did not form part of the printed specification and print/published pot s
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   263 AGGAAAACTAGGAATCTATGATGCTGATGGTGATGGAGATTTTGATGTGGATGATGCCAA 322
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Cardiant, antiarrhythmic; antiarteriosclerotic; vasotropic; cytostatic; vulnerary; antiinflammatory; nootropic; neuroprotective; antiparkinsonian; gene therapy; human; cardiovascular disorder; gene; ss.

The invention relates to 592 new human secreted polypeptides useful for diagnosing, treating or preventing e.g. immune disorders, inflammatory conditions, respiratory disorders, cancers, CNS disorders, inflammatory conditions, respiratory disorders, cancers, CNS disorders, or polypeptides comprising an amino acid neurodegenerative disorders, or polypeptides comprising an amino acid acids encoding the polypeptides, corporated that binds to the polypeptide, are useful in preparing diagnostic or pharmaceutical compositions for diagnosing, treating or preventing an e.g. immune compositions for diagnosing, treating or preventing an e.g. immune compositions for diagnosing, treating or preventing an e.g. immune compositions for diagnosing, treating or preventing an e.g. inflammatory bowel disease, nephritis or Crohn's disease, respiratory disorders (e.g. asthma and allergy), cancers (e.g. gastric, ovarian or lung cancer), CNS disorders (e.g. multiple sclerosis or ischaemic brain injury), neurodegenerative cardiovascular disorders (e.g. atherosclerosis or myocarditis), and cardiovascular disorders (e.g. atherosclerosis or myocarditis). The polymoleotides are useful for chromosome identification, chromosome mapping, for controlling gene expression through triple helix formation or antisense DNA or RNA, in gene therapy, for identification chromosome corresponders. The polypeptides are useful for as molecular weight markers on sodium dodecyl sulface-polyacrylamide gel electrophorasis (SDS-PAGS) censul, polliferative and/or cancerous diseases, This sequence corresponds to a gene encoding one of the polypeptide of the invention. Note: The sequence data for this patent did form part of the printed specification, to blt was obtained in electronic format directly from WIPO at the print of the print of the printed of the printed by the printed of the printed of the printed by the printed of the 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New human secreted polypeptides and polynucleotides, useful for diagnosing, treating or preventing e.g. immune disorders, inflammatory conditions, respiratory disorders, cancers, CNS disorders, or neurodegenerative disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           263 AGGAAAACTAGGAATCTATGATGCTGATGGTGATGGAGATTTTGATGTGGATGATGCCAA

New oligonucleotide libraries comprising oligonucleotides which selectively hybridize to mRNAs transcribed from a transcription unit of a genome, useful for detecting tissue-, pathology-, and developmental-specific genes

Example 1; SEQ ID NO 11070; 47pp; English.

The present invention describes oligonucleotide libraries for detecting messenger RNAs that populate a (sub-)transcriptom, where the (sub1 transcription comprises messenger RNAs transcribed from multiple
configuration units that populate a genome. The library comprises several dignomicleotides, ach capable of hybridising selectively to a set of messenger RNAs transcription unit of the genome, which encodes one or more messenger RNAs splice variants. The coligonucleotide libraries are useful for detecting mRNAs from a libraries are useful for detecting mRNAs from a libraries are useful for detecting mRNAs from a libraries and splice variants of human or animal contractively characterising the corresponding transcriptome, and in detecting RNA transcripts and splice variants of human or animal contraction of the sub-transcriptome under a particular confogical or pathological state, and so allowing the detection of tissue contraction or pathological state, and so allowing the detect of tissue under a specific pathological condition, to detect despective contraction of the splice disorder. ABN27253 to ABN59589 represent oligonucleotide sequences from caref, humans and milee, which are used in the exemplification of the present invention. N.B. The sequence data for this patent did not form to per directly from WIPO at ftp. wipo.int/pub/published_pot_sequences

This invention relates to a method of differentially modulating the growth or differentiation of blood endothelial cells (BEC) or lymphatic endothelial cells (LEC) comprises contacting endothelial cells (LEC) comprises contacting endothelial cells with a composition comprising an agent that differentially modulates blood or lymphatic endothelial cells. Treating heredicary lymphoedeam comprises dentifying a human subject with lymphoedeam and with a mutation in at least one allele of a gene encoding a LEC protein, where the mutation correlates with lymphoedeam in human subjects, and with the provise that the LEC protein comprision of lymphatic growth agent selected from VEGF-C or correlates with lymphoedeam in human subjects, and with the subject a composition comprisions of lymphatic growth agent selected from VEGF-C or VEGF-D polypeptides and polymucleotides. The invention may be useful for the development of compounds with an antiangiogenic, cytostatic, vascitorior or antiantialmancory activity or for gene therapy. The method is useful in modulating the growth or differentiation of blood endothelial cells or lymphatic endothelial cells in treating heredicament for the disorder or in monitoring the efficacy or toxicity of a drug on endothelial cells. The agent is useful in manufacturing a medicament for the differential not blood vessel endothelial cells growth agent may also be used in manufacturing a medicament for the treatment of hereditary lymphoedeam resulting from a mutation in a LEC gene or of other diseases involving the lymphatic vessels such as the treatment of hereditary lymphoedeam resulting from a mutation in a LEC gene or of other diseases involving the lymphatic vessels, such as the captes in the present sequence is that of a human LEC/BEC differentially expressed gene which is related to the method of the invention. Not expense index a given in table 14 of the specification.

This invention relates to the novel association of protein sequences (and the genes which encode them) to the NF-kappaB pathway. The invention may be useful for the production of compounds with an antinifianmancory, cytostatic, hepatotropic, virucide, antiarteriosclerotic, antiarheumatic, antiarteriosclerotic, antiarteriosclerotic, immunosuppressive or immunomodulator, cerebroprotective, vasotropic, immunosuppressive or vulnerary activity or for gene therapy. The proteins and nucleotides are useful for diagnosing, preventing, treating, or ameliorating conditions or diseases associated with the NF-kappaB pathway. The condition is an immune disorder, an inflammatory disorder, an inflammatory disorder as related to aberran NF-kappaB regulation, cancer, aberrant apoptosis, related to aberrant NF-kappaB regulation, cancer, aberrant apoptosis, spendromes, hypohidrotic ectodermal dysplasia, X-linked anhidrotic ectodermal dysplasia, immunodeficiency, viral infections, HIV-1, HILV-1, hepatitis B, hepatitis C, EBV, influenza, viral replication, host cell

The invention relates to a novel isolated nucleic acid and the PRO polypeptide encoded by it. A protein of the invention has antiinflammatory, antiarthritic, antichemmatic, immunosuppressive, osteopathic, antidiabetic, dermatological, antipsoriatic, antiallergic, antiasthmatic, hepatocropic, and respiratory activity. A polynucleotide of the invention may have a use in gene therapy. The PRO polypeptide, its agonist, antagonist, or antibody that specifically binds to the polypeptide is useful for treating an immune related disorder such as systemic lupus erythematosus, rheumatoid arthritis, osteoarthritis,
             bowel disease, colitis, asthma, atherosclerosis, cachexia, euthyroid sick syndrome, stroke, EAE, autoimmune disorders, disorders related to hyper immune activity, disorders related to aberrant acute phase responses, hypercongenital conditions, birth defects, necrotic lesions, wounds, organ transplant rejection, birth defects, necrotic lesions, wounds, organ transplant rejection, conditions related to organ transplant rejection, conditions is related to organ transplant proliferating disorders related to aberrant signal transduction, necessity with other viruses. The present sequence is that of a human gene which is subject to the novel association with the NF kappaB pathway of the invention. Note: This sequence does not appear in the specification but was obtained by the indexer from Genbank.
                                                                                                                                                                                                                                                                                                                                                       ö

ABB78993 to ABB79004 represent proteins encoded by the ABG60776 to ABG60787 nucleic acid equences. (I) can be used in antisense therapy. An antibody immunoreactive with a polypoptic encoded by (I) is useful for detecting cancer in a patient sample, and for detecting the presence or absence of a polynucleotide encoded by an uncleic acid which hybridises to (I) in a cell. A probe/primer derived
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New isolated nucleic acid that is differentially expressed in cancer tissues useful for determining the presence of colon cancer in a cell or tissue type, and in antisense therapy.

ö
from (I) can be used for determining the presence of a nucleic acid which hybridises to (I), and for determining the phenotype of cells in a sample of cells from a patient. (I) is useful for determining the presence of colon cancer in a cell or tissue type, for determining the presence or state of other type of cancer, in antisense therapy, to generate macroarrays on a solid surface, to identify a chromosome on which the corresponding gene resides, and in tissue profilling, forensics, genetic analysis, mapping and diagnostic applications. (I) can be used to raise antibodies, and to screen for peptide analogues and antagonists
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Identifying an agent that modulates the function of an apoptosis-
associated polypeptide, useful for diagnosing or treating e.g. cancer,
comprises comparing the binding of the polypeptide to the candidate agent
and to a control agent.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This invention relates to novel agents that modulates the function of buman apoptosis associated proteins specified within the specification. Specifically, it refers to a method for the identification of target genes whose expression is correlated with an early stage in the regulation of apoptosis. The present invention describes a method of contacting either candidate agents or control agents to the target genes and assessing the difference of binding and inhibitory activity, where the candidate agent is selected from a low molecular weight organic molecule, an antibody or fragment thereof, an antisense oligonucleotide, a small inhibitory disRNA, or a ribozyme. As such, the compositions and methods are useful for diagnosing and treating diseases or conditions associated with abnormal apoptosis in mammalian tissue, such as cancer, inflammation, autoimmune or neurodegenerative disorders. Accordingly, they exhibit cytostatic, antiinflammatory, immunosuppressive and
                                                                                                                                                                                                                                                                                                           0; Gaps
                                                                                                                                                                                                                                                                                                                                             2274 CITCCAGCAATITAGCATGAATICATGCAAGCTTGGGAAACTCTGGAGAGA 2324

```
This invention relates to novel agents that modulates the function of human apoptosis-associated proteins specified within the specification. Specifically, it refers to a method for the identification of target genes whose expression is correlated with an early stage in the regulation of apoptosis. The present invention describes a method of contacting either candidate agents or control agents to the target genes contacting either candidate agents or control agents to the target genes and assessing the difference of binding and inhibitory activity, where the candidate agent is selected from a low molecular weight organic molecule, an antibacky or fragment thereof, an antisense oligonuclectide, as small inhibitory dSRNA, or a ribozyme. As such, the compositions and methods are useful for diagnosing and treating diseases or conditions associated with abnormal apoptosis in mammalian tissue, such as cancer, inflammation, autoinmune or neurodegenerative disorders. Accordingly, they exhibit cytostatic, antiinflammatory, immunosuppressive and control or neuroprotective activities. These may also be used for drug screening purposes and in gene therapy. This oligonucleotide sequence is a quantitative PCR primer used to amplify a target gene associated with an exemplification of the invention.
                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Identifying an agent that modulates the function of an apoptosis-associated polypeptide, useful for diagnosing or treating e.g. cancer, comprises comparing the binding of the polypeptide to the candidate agent
neuroprotective activities. These may also be used for drug screening purposes and in gene therapy. This oligonucleotide sequence is a quantitative PCR primer used to amplify a target gene associated with apoptosis regulation, given in an exemplification of the invention.
                                                                                                                                                                                            Gaps

The invention is useful in developmental biology and in elucidating call signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL10511), expressed DNA sequences (ABL16176-ABL10511), expressed DNA ABB72072). The sequence data for this patent did not form part of printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and instructions in higher eukaryotes for the development of insectioides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLIG176-ABLIG17) expressed DNA sequences (ABLIG176-ABLIG17), expressed DNA ABRIG170.). The sequence data for this parent did not form part of the printed specification, but was obtained in electronic form part of the from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                              detection reagent for detecting 1000 or more for elucidating cell signaling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New isolated nucleic acid detection reagent for detecting 1000 or more sense from Drosophila and for elucidating cell signaling and cell-cell interactions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Drosophila; developmental biology; cell signalling; insecticide; pharmaceutical; gene; ds.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and real-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16176-ABL30511), expressed DNA ABB2072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signaling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidaring cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLA6176-ABL30511), expressed DNA sequences (ABLA6176-ABL30511), expressed DNA ABR2072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly
                                            capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell. interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16176) and the encoded proteins (ABBC101840-ABBL16175) and the encoded proteins (ABBC10173). ABBC2072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher enkaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30211), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57377-ABB72072). The sequence data for this patent did not form part of the printed specification, but, was obtained in electronic format directly

```
The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and insercitides. The invention this experise in the development of insercitides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLi6176-ABL30511), expressed DNA sequences (ABLi6176-ABL30511), expressed DNA sequences (ABLi6175) and the encoded proteins (ABB57737-ABB7072). The sequence data for this parent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               /*tag= a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and influencial interactions in higher eukaryotes for the development of insectioides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16176, ABL30511), expressed DNA ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signaling and cell-cell interactions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                               Drosophila melanogaster expressed polynucleotide SEQ ID NO 22850.
                                                                                          developmental biology; cell signalling; insecticide;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            developmental biology; cell signalling; insecticide; al; gene; ds.

The invention provides a composition comprising at least one oligonucleotide, of 9-35 bases, that binds specifically to part of the oligonucleotide, of 9-35 bases, that binds specifically to part of the mRNA, expressed from the gene encoding a mammalian betal-adrenoceptor mRNA alters transcription of the mRNA in cells. The compositions are used to treat transcription of the mRNA in cells. The compositions are used to treat diseases associated with increased number or activity of the betal-adrenoceptor polypeptide, specifically hypertension and myocardial ischemia. The compositions can also be used to produce recombinant ischemia. The antisense oligos may also be used to offect the mRNA or related DNA, including visualization within a cell, to generate transgenic animals with altered betal-adrenoceptor activity, and to screen patients for susceptibility to hypertension of particular alleles of betal-adrenoceptor genes. The present sequence represents the polymuclectide sequence of the canine betal-adrenoceptor (GenBank Acon No: U73207)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Novel antisense oligonucleotides that specifically bind to mRNA encoding beta 1-adrenoreceptor polypeptide, useful for treating cardiac dysfunction, hypertension, hypertrophy and other cardiovascular diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to an isolated antisense oligonucleotide of 9-35 nucleotides in length, which specifically binds to a portion of an mRNA expressed from a gene encoding a mammalian betal-adrenoceptor (AR) polypeptide and alters the translation of the mRNA into the betal-AR polypeptide in a host cell expressing the mRNA. Also included are a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ds; antisense; betal adrenoceptor; betal-AR; vasotropic; hypotensive; cardiant; hypertension; hypertrophy; cardiac ischaemia; cardiovascular disease; cardiac dysfunction; gene.

                                                                                                                                                                                                                                                                                                                                                                                                   This invention relates to novel agents that modulates the function of human apoptosis-associated proteins specified within the specification. Specifically, it refers to a method for the identification of target spens whose expression is correlated with an early stage in the regulation of apoptosis. The present invention describes a method of contacting atther candidate agents or control agents to the target genes and assessing the difference of binding and inhibitory activity, where the candidate agent is selected from a low molecular weight organic molecule, an antibody or fragment thereof, an antisense oligonucleotide, as small inhibitory dSRN, or a ribozyme. As such, the compositions and methods are useful for diagnosing and treating diseases or conditions associated with abnormal apoptosis in mammalian tissue, such as cancer, inflammation, autoimmune or neurodegenerative disorders. Accordingly, they exhibit cytostatic, antiinflammatory, immunosuppressive and purposes and in gene therapy. This oligonucleotide sequence is an siRNA oligo used to knockout expression of a human gene identified to be the contact on the contact of the contact on the regulation of a human gene identified to be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New antisense oligonuclectides, useful for treatment and prevention of hypertension and myocardial ischemia, are directed against mRNA encoding the betal-adrenoceptor.
                                                                                                                 Identifying an agent that modulates the function of an apoptosis-associated polypeptide, useful for diagnosing or treating e.g. cancer, comprises comparing the binding of the polypeptide to the candidate agent and to a control agent.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

recombinant vector comprising the antisense oligonuclectide, and a host cell comprising the vector. A composition comprising the antisense oligonuclectides is useful in the manufacture of a medicament for use in treating or ameliorating hypertension, hypertrophy and cardiac ischaemia in a mammal. A composition comprising the antisense oligonuclectides is also useful for reducing the level of betal-AR polypeptide, the transcription of betal-AR polypeptide specific mRNA in a mammalian host call, particularly human cell, and for decreasing blood pressure in a promoter capable of expressing the oligonuclectide in the cell. A promoter capable of expressing the oligonuclectide in the cell. A promoter capable of expressing the oligonuclectide in the cell. A composition comprising a selected nucleic acid segment that comprises polymuclectide in a full length betal-adrenoceptor antisense polymuclectide in a cell is also useful for reducing the level of betal-coligonuclectide in a cell is also useful for reducing the level of betal-coligonuclectide is also useful for other cardiovaccular diseases and cardiac dysfunction in humans. The present sequence is a mammalian betal-che a function in humans. The present sequence is a mammalian betal-che are a promoted to the cardiac dysfunction in humans. The present sequence is a mammalian betal-che are cardiac dysfunction in humans. The present sequence is a mammalian betal-che are cardiac dysfunction in humans. The present sequence is a mammalian betal-che are cardiac dysfunction in humans. The present sequence is a mammalian betal-che are cardiac dysfunction in humans. The present sequence is a mammalian betal-che are cardiac dysfunction in humans. The present sequence cardiac dysfunction in humans. The present sequence of the cardiac dysfunction in humans. The present sequence cardiac dysfunction in humans. The present sequence cardiac dysfunction in humans. The present sequence cardiac dysfunction in humans of the cardiac decreases and cardiac dysfunction in the cardiac dysfu
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Signalling lymphocyte activation molecule; SLAM, SLAM associated protein; SAP, BAT-2, antigen specific T cell activation.
X-linked proliferative disease; XLP, tuberculosis; AIDS; schistosomiasis; cancer; breast cancer; prostate cancer; leukemia; leprosy;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New signaling lymphocyte activation molecule associated protein useful in the treatment of tuberculosis and AIDS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence represents part of a signalling lymphocyte activation molecule (SIAM) associated protein (SAP) gene. A SAP family member polypeptide (such as BAT-2) or a fragment, mutant or fusion can be used for treating a disease involving aberrant SH2 domain-containing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      DNA sequence of the 5' region/exon 1/intron 1 of murine SAP gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            .

The present sequence represents an antisense oligonucleotide which inhibits human aspartyl (asparaginyl) beta-hydroxylase (HAAH) gene.

Epidermal growth factor (EGF) -like domains of polypeptides are hydroxylated by HAAH enzymes. HAAH is used in the method of the invention. The specification describes a method for diagnosing a malignant neoplasm in a mammal. The method comprises contacting a body fluid with an antibody which binds to HAAH polypeptide under complex. The method is useful for diagnosing an analysman neoplasm in a bodily fluid e.g. central nervous system (CNS) derived body fluid, blood, serum, urine, saliva, sputum, lung effusion, and ascites fluid of mammal, where the neoplasm is derived from endodermal tissue and is selected from colon canner, breast cancer, pancreatic cancer, liver cancer of bile ducts, and cancer of the CNS. HAAH antibodies, linked to a cytotoxic agent, are useful for killing tumour cells
protein-mediated signal transduction in a patient. Upregulation of SAP family members can be used for the treatment of diseases involving insufficient antigen-specific T cell activation (e.g. X-linked proliferative disease (XLP), tuberculosis, AIDS, schistosomiasis) or cancer (e.g. breast cancer, prostate cancer, leukemia), or leprosy. Downregulation of SAP family members can be used for the treatment of diseases characterized by an excessive amount of antigen-specific T cell activation (e.g. autoimmune diseases). The products can also be used for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Diagnosing malignant neoplasm in a mammal, involves contacting mammalian sample with antibody that binds to human aspartyl beta-hydroxylase polypeptide to form antigen-antibody complex and detecting the complex.

Diagnosing malignant neoplasm in a mammal, involves contacting mammalia:
sample with antibody that binds to human aspartyl beta-hydroxylase
polypeptide to form antigen-antibody complex and detecting the complex.
                                                                                                                                                                                           Epidermal growth factor-like domain; EGF-like domain; cancer; human aspartyl beta-hydroxylase; HAAH; malignant neoplasm; tumour; antisense oligonucleotide; ss.
                                                                                                                                                                    Human aspartyl (asparaginyl) beta-hydroxylase antisense molecule.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            (RHOD-) RHODE ISLAND HOSPITAL LIFESPAN PARTNER.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence represents an antisense oligonuclectide which inhibits human aspartyl (asparaginyl) beta-hydroxylase (HAAH) gene. Bepidermal growth factor (EGF)-like domains of polypeptides are hydroxylated by HAAH enzymes. HAAH is used in the method of the invention. The specification describes a method for diagnosing a malgnant neoplasm in a mammal. The method comprises contacting a body fluid with an antibody which binds to HAAH polypeptide under complex forming conditions, and detecting the antigen-antibody complex. The method is useful for diagnosing and prognosing a malipant neoplasm in a bodily fluid e.g. central nervous system (CNS)-derived body fluid, blood, serum, urine, saliva, sputum, lung effusion, and ascites fluid of mammal, where the neoplasm is derived from endodermal tissue and is selected from
                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   a cancer, breast cancer, pancreatic cancer, liver cancer, cancer of ducts, and cancer of the CNS. HAAH antibodies, linked to a cytotoxic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Diagnosing malignant neoplasm in a mammal, involves contacting mammalian sample with antibody that binds to human aspartyl beta-hydroxylase polypeptide to form antigen-antibody complex and detecting the complex.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps

The present sequence represents an antisense oligonucleotide which inhibits human aspartyl (asparaginyl) beta-hydroxylase (HAAH) gene. Bepidermal growth factor (BGF)-like domains of polypeptides are hydroxylated by HAAH enzymes. HAAH is used in the method of the invention. The specification describes a method for diagnosing a malignant neoplasm in a mammal. The method comprises contracting a body fluid with an antibody which binds to HAAH polypeptide under complex forming conditions, and detecting the antigen—antibody complex. The method is useful for diagnosing and prognosing a malignant neoplasm in a health of complex in the condity fluid e.g. central nervous system (CNS)-derived body fluid, blood, serum, urine, saliva, subtum, lung effusion, and ascites fluid of mammal, where the neoplasm is derived from endodermal tissue and is selected from

Diagnosing neoplasm and inhibiting tumor growth, by contacting tissue of mammal with detectably-labeled antibody which binds to human aspartyl (asparaginyl) beta-hydroxylase.

Example 6; Page 18; 34pp; English.

The invention relates to diagnosing a neoplasm and inhibiting tumour CC growth in a mammal, using an antibody that binds to human aspartyl captrownly beta beta bydroxylase (HAAH). Diagnosing a neoplasm comprises contacting a tissue with a detectably-labelled antibody where an increase in level of antibody binding at tissue site compared to the level of binding to normal non-neoplastic tissue indicates the presence of a comparation in non-neoplastic tissue site. Inhibiting tumour growth in mammal involves administering the antibody conjugated to a cytotoxic agent to a mammal. Also included are a method of conferring an immune response to a tumour call in a mammal, by administering the antibody, a method of inducing an HAAH-specific immune response in a mammal, by administering to the mammal can HAAH polypeptide (or a polymucleotide composition of HAAH comprising an extracellular domain and lacking a cytoplasmic domain of HAAH, and extracellular domain and lacking a cytoplasmic domain of HAAH, and extracellular domain and lacking a cytoplasmic domain of HAAH, when the comparison of antibody or its fragment which binds to HAAH (where the antibody is FB50, CC activity or alpha-ketoglutarate binding domain and appidermal growth factor (ESP)-like domain. The methods are useful for diagnosing neoplasm or response to a brain tumour cell (e.g. glioma, glioblastoma, astrocytoma or mammal, inhibiting tumour growth in a mammal, inhibiting tumour cell and for inducing a HAAH-specific immune response to a brain tumour cell and for inducing a HAAH-specific immune response to a prain tumour cell and for inducing a mammal, presponse to a conferring mannal, for conferring immune response to a cancer, pancreatic cancer, liver cancer and cancer, breast cancer, pancreatic cancer, liver cancer and cancer of the bile ducts of the bile or bright and method is also useful for diagnosing neoplasms of central nerv (CNS) e.g. primary malignant CNS neoplasms of both neuronal and gli cell origin and metastatic CNS neoplasms, and for disgnosing brain tumours e.g. glioma, glioblastoma, astrocytoma or haemangioma. The present sequence represents a Human HAAH antisense oligonucleotide

Diagnosing neoplasm and inhibiting tumor growth, by contacting tissue of mammal with detectably-labeled antibody which binds to human aspartyl (asparaginyl) beta-hydroxylase.

Example 6; Page 18; 34pp; English.

The invention relates to diagnosing a neoplasm and inhibiting tumour of growth in a mammal, using an antibody that binds to human aspartyl (asparaginyl) beca-hydroxylase (HAAH). Diagnosing a neoplasm comprises contacting a tissue with a detectably-labelled antibody where an increase in level of antibody binding at tissue indicates the presence of a binding to normal non-neoplasmic tissue indicates the presence of a contacting the antibody conjugated to a cytotoxic agent to a mammal. Contacting the antibody conjugated to a cytotoxic agent to a mammal. Also included are a method of conferring an immune response to a tumour coll in a mammal, by administering the antibody, a method of inducing an HAAH polypeptide, or its degenerate variant), a fragment of HAAH comprising an antibody or its fragment and lacking a cytoplasmic domain of HAAH, an autibody or its fragment which binds to HAAH (where the antibody is FB50, controlly or 198), a hybridoma cell line chosen from hybridoma FB50, that so in a mammal, and affecting a cytoplasmic of main of HAAH, and a mammal, and affecting a cytoplasmic of main of HAAH, and a mammal, and affecting a cytoplasmic of main of HAAH, and a mammal, and affecting a cytoplasmic of main and apidermal growth carrier (EGF)-like domain. The methods are useful for diagnosing neoplasm correction a mammal, for conferring immune response to a pancratic carcinoma cell de. 3. glioma, glioblastoma, astrocytoma creponse in a mammal, for conferring immune response to a pancratic carcinoma cell and for inducing a HAAH-specific immune response to a cancer, pancratic cancer, liver cancer and cancer of the bile ducts. The method is useful for diagnosing malignant concer, pancratic cancer, liver cancer and cancer of the bile ducts. The method is useful for diagnosing neoplasms of central nervous system (CNS) e.g. primary malignant CNS neoplasms of central nervous system concer, pancratic cancer, liver cancer and cancer of the bile ducts.

activity or alpha-ketoglutarate binding domain and epidermal growth factor (EGF)-like domain. The methods are useful for diagnosing neoplasm factor (EGF)-like domain. The methods are useful for diagnosing neoplasm or seponse to a brain tumour growth in a mammal, conferting an immune response to a brain tumour conferring immune response to a mammal, for conferring immune response to a parcratic carcinoma cell and for inducing a HAAH-specific immune response in a mammal. The method is useful for diagnosing malignant cancer, pancreatic cancer, liver cancer and cancer of the bile ducts. The method is also useful for diagnosing neoplasms of central nervous system cancer, paintmary malignant CNS neoplasms of both neuronal and glial cell origin and metastatic CNS neoplasms, and for diagnosing brain tumours e.g. glioma, glioblastoma, astrocytoma or haemangloma. The present sequence represents a Human HAAH antisense oligonucleotide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Identifying an agent that modulates the function of an apoptosis-associated polypeptide, useful for diagnosing or treating e.g. cancer, comprises comparing the binding of the polypeptide to the candidate agent and to a control agent.
                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   /*tag= a

Specifically, it refers to a method for the identification of target genes whose expression is correlated with an early stage in the regulation of apoptosis. The present invention describes a method of contacting either candidate agents or control agents to the target genes and assessing the difference of binding and inhibitory activity, where the candidate agent is selected from a low molecular weight organic molecule, an antibody or fragment thereof, an antisense oligonucleotide, as mall inhibitory dispus, or a ribozyme. As such, the compositions and methods are useful for diagnosing and treating diseases or conditions and associated with abnormal apoptosis in mammalian tissue, such as cancer, inflammation, autoimmune or neurodegenerative disorders. Accordingly, neuroprotective activities. These may also be used for drug screening purposes and in gene therapy. This oligonucleotide sequence is an siRNA associated with the regulation of a human gene identified to be associated with the regulation of apoptosis, given in an exemplification
                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New human genome-derived single exon nucleic acid probes useful for human gene expression analysis, for identifying or characterizing alternative splicing events, for assessing genomic alterations or as tools for surveying tissues.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to a nucleic acid probe for measuring human gene expression, comprising any of the 27,400 fully defined nucleotide sequences in the specification, or their complements or fragments, and encoding at least 8 amino acids of any of the 6888 amino acid sequences fully defined in the specification. The probe is a single exon probe that hybridises under high stringency conditions to a nucleic acid molecule
                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human; probe; ss; gene expression; single exon probe; microarray; alternative splicing event; genomic alteration.
                                                                                                                                                                                                                                                                                                                                                                                                                                                         .

cc expressed in human cells or tissues. Also included are a spatially-
caddressable set of single exon nucleic acid probes for measuring human

CC gene expression (comprising a plurality of single exon nucleic acid

probes cited above, where each of the plurality of probes is separately

and addressably isolatable or amplifiable from the plurality), a single

condition of the above method is single exon

corriguous amino acids of any of the above mentioned amino acid

corriguous amino acids of any of the above mentioned amino acid

corriguous amino acids of any of the above mentioned amino acid

corriguous amino acids of any of the above mentioned amino acid

corriguous amino acids of any of the above mentioned amino acid

corriguous amino acids of any of the above mentioned amino acid

corriguous amino acids of any of the above mentioned amino acid

corriguous amino acids of any of the above mentioned amino acid

corriguous amino acids of any of the above mentioned amino acid

corriguous amino acids of any of the above mentioned amino acid

corriguous amino acids of any of the above mentioned amino acid

corriguous amino acids of any of the above method of providing

corriguous amino acids of any of the above method of providing

corriguous amino data by subscription, and a computer-readable

corrorage medium which contains a database having a plurality of records

correct in acidium malysis. The probes may be used as tools for surveying a specific exon, or in constructing genome-derived single exon microarrays.

corriguous and probes are used in identifying and characterising gross

corriguous and probes are used in identifying and characterising gross

corriguous and probes are used in identifying and characterising gross

corrigues and probes are used in identifying and contain their

corrigues or probe of the includes their exon, in assessing

corrigues and the genomic locus that includes their exon, in assessing

corrigues and the probes are used in identifying and succession and the acids,

corrigues and

                     The invention describes a new isolated nucleic acid encoding a Klebsiella pneumoniae polypeptide. Also described are: a recombinant expression vector comprising the nucleic acid, operably linked to a transcription regulatory element, and a cell comprising the recombinant expression vector. The nucleic acid is useful for preparing a vaccine composition against Klebsiella pneumoniae. This sequence encodes a Klebsiella pneumoniae polypeptide of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Stably transformed cells expressing endorphin, enkephalin and catecholamine - and artificial organs contg. them, useful for control of pain, esp. implanted in the CNS.

A DNA sequence (AATG2523) comprising a fusion between 1g8P and human proposonelanocortin (POMC) DNA can be utilised in the construction of vectors for the expression of endorphin cpds. Cleavage enzymes present in host cells can generate a suite of endorphins from POMC, some or all of which have analgesic properties. A DNA sequence (see also AATG2524) in which the ACTH coding region of the POMC gene is deleted its preferred. Host cells transformed with vectors (or a single polycistromic vector) encoding analgesic opds. can be encapsulated to form bioartificial organs that are implanted into a patient for control of pain

(HUMA-) HUMAN GENOME SCI INC.

Rosen CA, Barash SC, Ruben WPI; 2001-541565/60.

Nucleic acids encoding 3224 human nervous system antigen polypeptides, useful for preventing, diagnosing and/or treating nervous system cancers and metastases.

Disclosure; SEQ ID NO 11509; 1701pp + Sequence Listing; English.

The invention relates to novel genes (ABA11004-ABA21534) and proteins (ABB14678-ABB18001) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are medical conditions e.g. by protein or gene therapy. The genes are closated from a range of human tissues disclosed in the specification. The nucleic caids, proteins, antibodies and (ant)agonists are useful in the diagnosis, treatment and prevention of: a) cancer. e.g. breast and covarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune clisonical disease, altoimmune hawolytic anaemia, autoimmune thyvoiditis, diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular diseases e.g. cerebral anoxia and epilepsy; and (f) infections diseases such as wyocardial scheenias; (d) wound healing (e) infections diseases such as viral, bacterial, fungal and parasitic infections diseases such as viral, bacterial, fungal and parasitic the printed specification, but was obtained in electronic format directly way.

0.9%; Score 20; DB 5; Length 900;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention describes an isolated antibody that binds to one of the human PRO proteins designated PRO212, PRO290, PRO341, PRO535, PRO619, PRO717, PRO809, PRO8190, PRO819, PRO1059, PRO1051, PRO1182, PRO1184, PRO1059, PRO1059, PRO814, PRO1317, PRO1110, PRO2054, PRO2145 OR PRO2198. PRO antagonists can be used to inhibit tumour cell growth. The PRO2198. PRO antagonists can be used to inhibit tumour cell growth. The PRO2198. PRO antagonists can be used to inhibit tumour cell growth. The properties and other anti-tumour compounds and prevention of cancer. The antibodies and other anti-tumour compounds maybe used to treat various conditions, including those characterised by overexpression and/or activation of the amplified PRO genes. Exemplary conditions or disorders to be treated with such antibodies and other compounds include benign or malignant tumours (e.g., renal, liver, kidney, bladdar, breast, gastric, ovarian, colorectal, prostate, pancreatic, lung, vulva, thyroid, hepatic carcinomas, sarcomas, glioblastomas, and various head and neck tumours), leukaemias and lymphoid malignancies, other disorders such as neuronal, glial,

The agent is especially useful for treating pain associated with chronic inflammatory disorders. The neuroendoorine may be pro-opiomelanocortin (POMC) or corticotrophin-releasing factor (CRF). The present sequence is a fragment of the human POMC coding sequence
                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human, pro-opiomelanocortin; POMC; corticosteroid; pain; analgesic;

The invention relates to novel diagnostic and therapeutic polynucleotides selected from one of the 2722 sequences defined in the specification. A polynucleotide of the invention may have a use in gene therappy. The human polynucleotide of the invention may have a use in gene therappy. The human cated to diagnose a particular condition, disease or disorder associated with human molecules, e.g. cell proliferative disorder, endocrine autoimmune/inflammatory disorder, developmental disorder, endocrine disorder, neurological disorders, developmental disorder, rediting informations caused by virus, bacteria, fungi or paramite. The diting molecules may also be used in genetic mapping, in identifying individuals from minute biological samples, in detecting single nucleotide polymorphisms, as molecular weight markers, and for somatic or germline gene therapy. The present sequence data for this patent is not represented to the invention. Note: The sequence data for this patent is not represented in the printed specification, but was obtained in electronic format catery from WIPO at www.wipo.int/pct/en/sequences/listing.htm
                                                                                                                                                                                                                                       Schmidt JP, Wright RJ, Bruns CM, Marjanovic MM, Shen F;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABIL16176-ABIL30511), expressed DNA sequences (ABIL16176-ABIL30511), expressed DNA ABIR2072). The sequence data for this parent did not form part of the princed specification, but was obtained in electronic form part of the from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABL16175) and the encoded proteins (ABB57737 ABR22072). The sequence data for this parent did not form part of printed specification, but was obtained in electronic format directly from NIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signaling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Schmidt JP, Wright RJ, Bruns CM, Marjanovic MM, Shen F; Harthshorne TA, Suchorolski MT, Altus CM, Pitts SJ, Elder LV;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to novel diagnostic and therapeutic polynucleotides selected from one of the 2722 sequences defined in the specification. A polynucleotide of the invention may have a use in gene therapy. The human diagnostic and therapeutic polynucleotides (dithp) or polypeptides may be used to diagnost e ag. cell proliferative disorders, endorder associated with human molecules, e.g. cell proliferative disorders, candorine autoimmus/inflammatory disorder, developmental disorders, or disorder, neurological disorders, developmental disorders, or infections caused by virus, bacteria, fungi or parasite. The dithp of infections also be used in genetic mapping, in identifying individuals from minute biological samples, in detecting single nucleotide polymorphisms, as molecular weight markers, and for somatic or germline polymorphisms, as molecular weight markers, and for somatic or germline the invention. Note: The sequence represented a dithp polymorleotide of the invention. Note: The sequence data for this patent is not represented in the printed specification, but was obtained in electronic format directly from NIPO at www.wipo.int/pct/en/sequences/listing.htm
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                           Schmidt JP, Wright RJ, Bruns CM, Marjanovic MM, Shen F;

The invention relates to novel diagnostic and therapeutic polynucleotides selected from one of the 2722 sequences defined in the specification. A color polynucleotide of the invention may have a use in gene therappy. The human diagnostic and therapeutic polynucleotides (dithp) or polypepides may be used to diagnose a particular condition, disease or disorder associated with human molecules, e.g. cell proliferative disorders, endocrine disorder, entoimmune/inflammatory disorder, developmental disorders, or infections caused by virus, becaria, fungi or parasite. The dithp molecules may also be used in genetic mapping, in identifying individuals from minute biological samples, in detecting single nucleotide polymorphisms, as molecular weight markers, and for somatic or germine polymorphisms, as molecular weight markers, and for somatic or germine therapy. The present sequence represents a dithp polymucleotide of the invention. Note: The sequence data for this patent is not represented in the printed specification, but was obtained in electronic format the way also at waw.wipo.int/pct/en/sequences/listing.htm

The invention relates to novel diagnostic and therapeutic polynucleotides selected from one of the 2722 sequences defined in the specification. A color polynucleotide of the invention may have a use in gene therappy. The human diagnostic and therapeutic polynucleotides (dithp) or polypeptides may be used to diagnose a particular condition, disease or disorder associated with human molecules, e.g. cell proliferative disorders, endocrine continument/inflammatory disorder, developmental disorders, or autoimmune/inflammatory disorders, developmental disorders, or infections caused by virus, bacteria, fungi or parasite. The dithp from minute biological samples, in detecting single nucleotide from molecules may also be used in genetic mapping, in identifying individuals from minute biological samples, in detecting single nucleotide of polymorphisms, as molecular weight markers, and for somatic or germine gene therapy. The present sequence represents a dithp polynucleotide of the invention. Note: The sequence data for this patent is not represented in the printed specification, but was obtained in electronic format weight markers with particular weight was obtained in electronic format the printed specification, but was obtained in electronic format was warmed to the present sequence data for this patent is not represented the manner of the printed specification, but was obtained in electronic format was a first parent sequence data for the present sequence data for this patent sequence data for this patent sequence format the printed specification, but was obtained in electronic format was sequenced and sequenced sequenced and sequenced sequenced and sequenced seq
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This sequence represents a nucleic acid molecule which encodes a secreted thuman protein. The gene number, and the clone it is derived from, are detailed in the descriptor line. The gene can be used to generate fusion proteins by linking to the gene to a human immunoglobulin Fc portion.

(e.g. AAZ24802) for increasing the stability of the fused protein as compared to the human protein only. The invention relates to 95 novel genes and their fragments (nucleic acid sequences: AAZ4811.224907, amino compared to the human protein only. The invention relates to 95 novel genes and their fragments (nucleic acid sequences: AAZ4811.224907, amino compared to medical conditions e.g. by protein or gene therapy. Also, or ameliorating medical conditions e.g. by protein or gene therapy. Also, pathological conditions can be diagnosed by determining the amount of the new polypucleotides. Specific uses are described for each of the in the new polynucleotides. Specific uses are described for each of the in (see AAZ24811 for described uses)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                Yu G, Young PE, Feng P, Soppet DR;

        The invention relates to a novel isolated NOVX polypeptide. The polypeptide of the invention demonstrates, antidiabetic, anorectic, cardiant, hypotensive, antiarteriosclerotic, virucide, antibacterial, fungicide, proteozoacide, nockropic, meuroprotective, antiparkinsonian, anticonvulsant, osceopathic, antiarthritic; antiparkinsonian, dermacological, antiasthmate and antilipaemic activities. The polypeptides, nucleic acid molecules and antilipaemic activities. The polypeptides, nucleic acid molecules and antilogement as section of diseases including metabolic disorders such as cradiovascular diseases including metabolic disorders such as cardiovascular diseases including metabolic disorders such as cardiovascular diseases including hypertension and atherosclerosis, cardiovascular diseases including hypertension and atherosclerosis, neurodegenerative disorders such as Alzheimer's disease, Parkinson's disease and epilepsy, immune disorders, asthma and dyslipidaemia.

The neurodegenerative disorders caids and polypeptides may also be used to identify molecules that modulate or inhibit neurogenesis, cell anglogenesis, as well as in gene therapy. Finally, the nucleic acids may be used as hybridiation probes, in chromosome mapping, tissue typing, be used as hybridiation probes, in chromosome mapping, tissue typing, the human NOV cDNA of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                 Alsobrook JP, Alvarez E, Anderson DW, Baron M, Boldog FL; Burgess CE, Casman SJ, Chapoval A, Dhanabal M, Edinger SR, Eisen A; Elerman K, Ettenberg S, Gangolli EA, Gerlach VL, Gorman L; Grosse WM, Guo X, Hackett C, Ji W, Kekuda R, Khrantsov NV; Lepley DM, Li L, Macdougall JR, Malyankar UM, Mazur A, Mcqueeney K; Mezes SS, Millet CE, Millet I, Mishra VS, Padigaru M, Patturajan M; Pena CEA, Peyman JA, Rastelli L, Rieger DK, Shenoy SG, Shimkets RA; Smithson G, Starling G, Spytek KA, Stone DJ, Tcherney VT, Twomlow N; Vernet CAM, Zerhusen BD, Zhong M;
                                                                                                                                                                                                                                                                                                                                                                                                                                                New isolated NOVX polypeptides and polynucleotides, useful for .. 
preventing, diagnosing or treating NOVX-associated disorders, e.g.

The invention relates to human NOVX polypeptides and the polynucleotides encoding them. The NOVX polypeptides and polynucleotides are useful for encoding them. The NOVX polypeptides and polynucleotides are useful for etermining the presence of or predisposition to a disease associated with altered levels of the sequences in a mammalian subject, and for treating or preventing a pathology associated with NOVX. The polypeptides are useful for treating or preventing disorders or syndromes such as congenital heart defects, cardiomyopathy, atheroscierosis, hypertension, pulmonary stenosis, soleroders or sheroscierosis, hypertension, pulmonary stenosis, soleroderma, adenocarcinoma, haemophilia, graft-versus-host disease, cancer, neurodegenerative disorders, Alzheimer's disease, parkinson's disease, multiple sclerosis, diabetes, obesity, bronchial asthma, acquired immunodeficiency syndrome (AIDS), Crohn's disease, parkinson's disease, anorexia and immune disorders. This sequence represents a human NOVX polynucleotide of the invention. Note: The sequence data for this patent is also available from USPTO at sequence.uspressor.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and in elucidating cell signalling and insecticides, therapeutics and pharmaceutical darys. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16176-ABL30511), expressed DNA ABB2072). The sequence data for this parent did not form part of the princed appecification, but was obtained in electronic form part of the from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signaling and cell-cell

The present invention relates to polynucleotide sequences, and the proteins they encode. The sequences are isolated from a variety of proteins they encode. The sequences are isolated from a variety of corganisms such as plants (e.g. maize, rice, sorghum, thale cress, organisms such as plants (e.g. maize, rice, sorghum, thale cress, the production and wheat), cyanobacteria, bacteria, yeast and other fungi. The polynucleotide and polypoptide sequences of the invention are useful in comparing fertile transgenic plants, preferably maize, with desired phenotypes. The polynucleotide and polypoptide sequences are useful for improving plants by providing protection against comporting the cell cycle pathway, reducing blant height, modifying complexity improving plant height, modifying the cell cycle pathway, reducing plant height, modifying carbohydrate transport, improving disease resistance, improving disease resistance, improving corp productivity, improving plant growth and stress resistance, improving disease resistance, improving cold or heat tolerance, improving nitrogen assimilation, improving stalk serength, improving blotic and abjoric increased vigour, reducing senescence, and conferring virus resistance. The present sequence data for this patent is not provided in the printed specification but is obtained in electronic format from the USPTO printled specification but is obtained in electronic format from the USPTO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            0.9%; Score 20; DB 12; Length 1891;

The invention relates to plant nucleotide sequences that direct seed-, cor constitutive transcription of an operatively linked nucleic acid sequence. The invention also relates to a method for augmenting a plant segment. The invention also relates to a method for augmenting a plant segment. The invention also relates to a method for augmenting a plant companies of altered in the seed, leaf, stem, panicle, pollen, root or is constitutive in a plant cell. The plant is a cereal, e.g. soybean, alfalfa, sunflower, canola, cotton, peanut, tobacco or sugar beet, preferably maize, barley, corsphum, rice or wheat. The polynucleotides and the polypeptides they encode are useful for manipulating crop plants to alter or improve phenotypic characteristics, to produce large quantities of oil or proteins, to incur resistance to insecticides, viruses or fungi, and to incur stress tolerance (e.g. salt, cold or drought) to ensure the plants incur stress tolerance (e.g. salt, cold or drought) to ensure the plants carly flowering or altered metabolic pathways. This sequence or expresents a plant nucleic acid of the invention. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format directly from USPTO at sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New rice promoter, useful for manipulating crop plants to alter or improve phenotypic characteristics, e.g. produce large quantities of oil or proteins, resistance to insecticides, virus or fungi, stress tolerance or high nutritional value.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 2000 BP; 649 A; 375 C; 340 G; 630 T; 0 U; 6 Other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to a method (M1) for identifying genes involved in plant resistance or response to pathogenic infection. MI comprises identifying a gene whose expression is significantly altered in the incompatible interaction of plant gene expression relative to expression of the gene in an uninfected plant, in a mutant plant that does not express a gene associated with response to pathogenic infection, or in a corresponding incompatible or compatible interaction. (M1) is useful for conferring resistance to resistance or tolerance to a plant to bacterial, fungal or viral infection. The present sequence was used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          plant, gene; ss; transcription; plant genome augmentation; cereal; soybean; alfalfa; sunflower; canola; cotton; peanut; tobacco; sugar beet; smalze; barley; sorghum; rice; wheat; crop plant; insecticide resistance; stress tolerance; cold tolerance; drought tolerance; plant nutrition; apical dominance; dwarfism; early flowering; antiviral;

DNA encoding novel human diagnostic protein #7939.

```
The present invention describes primer sets for synthesising 5602 full-
length cDNAs defined in the specification. Where a primer set comprises:

(a) an oligo-dr primer and an oligomucleotide complementary to the complementary strand of a polymucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the compination of an oligomucleotide comprising a sequence complementary to the complementary strand of a polymucleotide which comprises a 5'-end complementary strand of a polymucleotide which comprises a 5'-end sequence and an oligomucleotide comprising a sequence complementary to a polymucleotide comprises a 1'-end sequence complementary to a polymucleotide comprises at least 15 nucleotides and the combination of the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primers are as an eased in antisense therapy and in gene therapy. The primers are useful for synthesising polymucleotides, particularly full-length cDNAs. The primers are also useful for the primers allow obtaining of the full-length cDNAs. The primers allow obtaining of the full-length CDNAs asily without any specialised methods. AAH13634 to AAH13638 and AAH13633 to AAH18742 represent human cDNA sequences; AAB92446 to AAB95893 represent invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Primer sets for synthesizing polynucleotides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length

```

```
The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain of sequences. (I) is useful as hybridisation probes, polymerase chain to reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in disgnostics as expressed sequence tags for identifying expressed of the disgnostics as expressed sequence tags for identifying expressed of sectivity of (II) or to treat disease states involving (II). (II) is useful in gene therapy techniques to restore normal cuplement (II) and its binding pattners are useful in medical imaging to polypeptide in tissue, as molecular weight markers and as a food of sites expressing (II). (I) and (II) are useful for treating disorders (Involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in colypeptide and polynucleotide sequences are applied and polynucleotide sequences or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and cold sequences. AAS64197 AAS9454 represent novel human diagnostic colding sequences of the invention. Note: The sequence data for this cold sequences of the invention. Note: The sequence data for this cold sequences of the invention appear in the printed specification, but was obtained in the vivine way will be a sequences of the invention of manning and produced produ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ô

The invention comprises the amino acid and coding sequences of proteins which have enzyme activity or protease, phosphodiesterase, transferase, or isomerase inhibitor activity. The DNA and protein sequences of the invention are useful for treating disorders associated with the proteins, such as blood clotting or circulatory disorders. The present DNA sequence represents a novel mouse gene of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Protease inhibitors, proteases, phosphodiesterases, transferases, isomerases and substances that affect their activity or expression useful for treating associated disorders.
